

The STOP program
from **BeRx**
promotes safety &
appropriateness
before opioids are
dispensed through
improved drug
utilization controls.

About BeRx

BeRx is a pharmacy solution built exclusively for the student population. BeRx enables its student members to Be Empowered by, Engaged in, and Educated about their prescription plans. BeRx is an offering from CHP and is designed to accompany plans from CHP Student Health.*

The BeRx Difference

With BeRx, we've taken control of the PBM experience for our members. BeRx moves beyond the cookie-cutter approach to pharmacy care with a PBM solution built specifically for the college health space that aligns with students' budgets, schedules, and lives.

**According to the the National Survey on Drug Abuse and Health (2015).

What is the BeRx STOP Program?

- STOP is an advanced point-of-sale intervention focused on utilization management controls for opioids.
- STOP applies a hold on incoming claims that puts a member morphine equivalent dose per day (MED) equal to or exceeding a hard-stop threshold of 120 MED.
- An override will be allowed if exceeding the 120 MED threshold is medically necessary.
- In addition, STOP applies a soft-stop on incoming claims with cumulative lower MED threshold of 90 that can be overridden by the pharmacy after a drug utilization review.

Why is STOP important?

- Opioid abuse, misuse, and addiction is a rising epidemic across the United States. More than half of young adults misusing prescription opioids are getting them from family and friends, and personal prescriptions are one of the main source of nonmedical opioid abuse.**
- A number of states have taken the initiative to prevent over-prescribing of opioid prescriptions by limiting initial opioid prescriptions for acute pain to a short-term days supply. However, regulations and practices to prevent opioid abuse and misuse are not consistent across state lines.
- The STOP Program from BeRx ensures all members receive are not put at additional risk for addiction.
